-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Fernandez. Fernandez teaches an apparatus for use in generating a desired intensity prescription having an input surface (11), and an optically active output surface (12) receiving a collimated beam (col. 4, lines 17-19), where the output surface refractively maps an illuminance distribution of the collimated beam into a prescribed intensity pattern (col. 10, lines 55-57) where the input and output surfaces at least in part define a volume of transparent dielectric (see Fig. 1b). The output surface can be a plurality of sections with disconnects between at least two of the plurality of sections (see Fig. 3). The input surface is a planar surface (11, 51). The output surface is rotationally symmetric (see Figs. 1b and 3).

### ***Allowable Subject Matter***

Claims 9-20 are allowed.

Art Unit: 2873

The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest the method for defining a lens profile that determines the output surface according to the surface normal vectors.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tawa et al is cited to show another type of lens having a collimated input to a desired intensity output.
